Web Application Testing: 8 Step Guide to Website Testing
Step 1: Functional Testing. The first step of web testing ensures

that the functions of a system are tested. On Wikipedia, Functional Testing is described as follows: Functional testing is a quality assurance (QA) process and a type of black-box testing that bases its test cases on the specifications of the software component under test. Functions are tested by feeding them input and examining the output, and internal program structure is rarely considered (unlike white-box testing).
